Rash	Life	I had been on 20mg daily dose of Cipramil for approx 3 years. Mentioned to the GP on a check up visit that I was getting a rash daily - had slight food allergies at that time and he put it down to that. I was not sure so started taking tablet every second day - the rash only appeared every second day. One day took tablet in the moring and by about lunch time started to feel like I had a cold/ flu coming on due to tightening of chest. Slept on and off and ny about 9pm that night rang the hospital to see how busy they were. Ended up at RDH at 11pm - was not aware but at the time the triage nurse saw me was blue around mouth and fingers. Staff put me on oxygen and ventolin however did not ...	oxygen, ventolin, adrenalin and steriods and then 28 day course of steroids after release from hospital

		... alleviate breathing difficulties and severe pain in chest. They then injected me with adrenalin which I remember helped immediately. I was in hospital for a couple of days on steriods - two hours after leaving the hospital was back at the GP as the rash was really starting to develop. She prescribed further course of steroids and told me not to stop taking them until the rash had completley disappeared. I was on the steroids for a month after this consult. Dr's at RDH did give me an adrenalin pen in case my reaction was due to food hayfever allergies - in my mind this was not the reason. Three or so years down the track have not had a reaction such as this although I have noticed that my ...
