	Other data				Echocardiography report 13/2/02: all chambers are markedly dilated. there is moderate to severe impairment of lv systolic function. the right ventricle is also hypokinetic. pulmonary artery systolic pressure is estimated to be 51mmhg there is a small pericardial effusion. conclusion: 1.dilatation of all heart chambers with moderate to sever impairment of left ventricular systolic

Additional Information:

Mild improvement on aggressive treatment for ccf but still has severe left ventricular dysfunction. the dose start date for the drug olanzapine is not necessarily accurate but indicates the drug was started sometime in the month. the date of onset is not necessarily accurate but indicates onset sometime in the month. there is a strong family history of coronary artery disease and cardiomyopathy

LITHIUM CARBONATE (Suspected)			**Reason:**		
	400.0	Milligram	Daily		
Batch:	**Started:**			**Stopped:**	0

Laboratory Investigations:

Date	Type	Range	Date Tested	Result	Details
26/03/2007	Electrocardiograph				Electrocardiogram ST-T segment abnormal, ECG QT prolonged, Bundle branch block right, ECG ST segment elevation, ECG T wave inversion.
26/03/2007	Serum drug level				Amitriptyline level was 1.36 mmol/L (NR 0.27 - 0.72), nortriptyline was 3.92 (NR 0.19 - 0.57) and Lithium level was 0.2 (NR 0.5 - 1.0)
26/03/2007	Troponin				Troponin I was undetectable.

Additional Information:

The authors considered the QT prolongation related to treatment with amitriptyline and haloperidol. The authors comment that Brugada syndrome "has been associated with mutations in the sodium channel, SCN5A and may be unmasked by medications with sodium channel blocking activity". Furthermore, "in this case, all four medications may inactivate the cardiac sodium channels".
